

Beautiful bifolding doors

Our Easifold folding and sliding doors will give your home that "something special". Using some of the most technically advanced systems on the market, our bifolding doors make the most of space in an innovative way. Make your dream home a reality.

Whether you want to replace your existing patio doors, or are planning a new project, our folding sliding doors will add versatility and style, making socialising and entertaining more pleasurable. Your doors will be an admired feature of your home. And with a great choice in colours and finishes, your home will instantly be unique. Our folding sliding doors are designed and manufactured to the highest standards.

Recognised as setting the benchmark in both design and technology, Easifold folding sliding doors are used throughout the world in all climates and weathers. It is no surprise that they met and exceeded the building regulations for thermal efficiency. Easifold doors offer the advantage of a flush floor track, giving you an unobstructed walkway and the feel of open plan.

The ideal solution for conservatories and pool rooms

Folding sliding doors can open far wider than conventional French doors and offer up to 95% clear opening as opposed to the typical 40% from patio doors. Whole walls can now be literally and effortlessly swept aside in seconds enabling any room to embrace the great outdoors.

Enhance the relationship between the interior and exterior of your home

Suitable for both the domestic and commercial markets, whatever the requirement, we can provide a tailored bespoke answer for any commercial or domestic project. We offer a wide range of top specification products, all available in a choice of finishes and in the whole spectrum of RAL colours, with dual colour options for interior and exterior if required.

DOOR FEATURES:

Safe and Secure

Our doors have enhanced security measures in line with the “Secured By Design” standards established by the Association of Chief Police Officers. Every lead door panel has a five point locking system with 25mm projection hooks, full height faceplate and adjustable keep. Individual door panels are joined by three adjustable high security hinges. Anti-drill locks and shoot bolt intermediate locking complete our industry leading protection.

Weatherproof

Easifold doors can take everything the British climate can throw at it. Because of its unique design features and high performance weather seals, a door with a standard weather threshold has an independently tested British Standard (BS 6375) exposure rating of “1200 special”. This means that our doors can withstand severe weather conditions and give your home long term protection from intense wind and rain.

Low thresholds

The base track of an Easifold frame can be sunk into the floor to minimise trip hazards. Dependent upon the floor material and the floor levels of the spaces on either side of the Easifold door, an exposed lip height as small as 12mm can be achieved thanks to our special enclosed base track design. Even if it is not possible to sink the base track into the floor, a very low weather proof lip height of 66mm can still be achieved.

Very low maintenance

The high performance materials of an Easifold door need only the smallest amount of care to keep them looking brand new and working perfectly. Just wiping down the powder coated frames with soapy water occasionally, applying a silicon spray to the rubberised gaskets once a year and lubricating the locks and hinges twice a year is all that is needed. The free glide opening system requires no maintenance other than using a vacuum cleaner once a week to keep the track debris free during the months the doors are used.

Ultra Slim Frames maximise the light in your home

Our unique 75mm frame profiles are narrower than most bi-fold doors, which means we can use larger glass panels, which in turn means more light and better views. Not every manufacturer can make an ultra-slim frame. Easifold's exclusive design and the precision manufacturing tolerances employed at their High Wycombe factory are the key factors in a frame that is narrow, lightweight and very strong.

Safe for little fingers

The joints between every Easifold door panel have a special safety feature which stops fingers, particularly children's little fingers, getting trapped. Our unique interlocking joint gasket is made from a flexible thermoplastic elastomer and shaped so that even when the doors are fully open there is no gap for unwary fingers to get caught in. Thanks to its precision design, even as the door closes there are no exposed sharp edges to cause injury and absolutely no chance of trapping a finger.

Colours

We offer a specially selected range of 7 bespoke colours plus 3 natural wood effects. Additionally, you can choose from the full range of Interpon RAL colours, oak and mahogany.

APPROVED INSTALLERS OF
EASIFOLD BIFOLDING DOORS

Based in Watford, Hertfordshire, Harp Windows is a family owned and family run company, and was established back in 1989. We both manufacture and install high quality replacement windows, doors and conservatories.

Over the years, we've worked hard to build up an established local reputation based on professional integrity, efficient customer service, quality and value for money.

You can see us at our showroom in Bushey Arches, or at our factory in Watford, where we manufacture many of our products.

As members of the Consumer Protection Association, all our installed products are automatically covered by our watertight insurance backed ten year guarantee, providing you with the complete peace of mind you deserve.
